

**Pioneer**

# ***Service Manual***

ORDER NO.  
RRV2032

COMPACT DISC RECORDER

# **PDR-V500**

- Refer to the service manual RRV1983 for PDR-555RW/KU/CA.

THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

Type	Model	Power Requirement	Remarks
	PDR-V500		
KU/CA	○	AC120V	

1. CONTRAST OF MISCELLANEOUS PARTS

NOTES: ● Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.  
● The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.  
● Screws adjacent to  mark on product are used for disassembly.  
● Reference Nos. indicate the pages and Nos. in the service manual for the base model.  
● When ordering resistors, first convert resistance values into code form as shown in the following examples.  
Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).  
560 → 56 x 10<sup>1</sup> → 561 ..... RD1/4PU561J  
47k → 47 x 10<sup>3</sup> → 473 ..... RD1/4PU473J  
0.5 → R50 ..... RN2H50K  
1 → 1R0 ..... RS1P1R0K  
Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).  
5.62k → 562 x 10<sup>1</sup> → 5621 ..... RN1/4PC5621F

■ CONTRAST TABLE

PDR-555RW/KU/CA and PDR-V500/KU/CA are constructed the same except for the following :

Ref. No.	Mark	Symbol and Description	Part No.		Remarks
			PDR-555RW /KU/CA	PDR-V500 /KU/CA	
P4 - 2	NSP	<b>PACKING</b>

# 1. SAFETY INFORMATION

This service manual is intended for qualified service technicians ; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

## WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 – Proposition 65

## NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols  (fast operating fuse) and/or  (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

## REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible  (fusible de type rapide) et/ou  (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

## (FOR USA MODEL ONLY)

### 1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

#### LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

AC Leakage Test

**ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.**

### 2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a  $\Delta$  on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

## — IMPORTANT —

THIS PIONEER APPARATUS CONTAINS  
LASER OF CLASS IIIb.  
SERVICING OPERATION OF THE APPARATUS  
SHOULD BE DONE BY A SPECIALLY  
INSTRUCTED PERSON.

## — LASER DIODE CHARACTERISTICS —

MAXIMUM OUTPUT POWER: 23 mW  
WAVELENGTH: 778 – 787 nm

**AVOID DIRECT EXPOSURE TO BEAM.**  
PRW1516-A

## — Additional Laser Caution —

## 1. Laser Interlock Mechanism

The position of the switch (S601) for detecting loading state is detected by the system microprocessor, and the design prevents laser diode oscillation when the switch (S601) is not on CLMP terminal side (CLMP signal is OFF or high level.). Thus, the interlock will no longer function if the switch (S601) is deliberately set to CLMP terminal side (low level).

The interlock also does not function in the test mode \*.  
Laser diode oscillation will continue, if pin 1 of M51593FP (IC101) on the PRE-AMP BOARD ASSY mounted on the pickup assembly is connected to GND, or pin 19 is connected to low level (ON), or else the terminals of Q101 are shorted to each other (fault condition).

2. When the cover is opened with the servo mechanism block removed and turned over, close viewing of the objective lens with the naked eye will cause exposure to a Class 1 laser beam.

\* Refer to page 49 .

## 2. EXPLODED VIEWS AND PARTS LIST

- NOTES:
- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
  - The  $\Delta$  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
  - Screws adjacent to  $\blacktriangledown$  mark on the product are used for disassembly.

### 2.1 PACKING

## 2.5 SERVO MECHANISM ASSY

### • Bottom View

### • How to Install the Disc Table

- 1 Use nippers or other tool to cut the two sections marked **A** in figure 1.
- 2 While supporting the spindle motor shaft with the stopper, put spacer on top of the carriage base, and stick the disc table on top (takes about 9kg pressure). Take off the spacer.

## 6. ADJUSTMENT

## 6.1 DISCS TO BE USED

1. When adjusting the servo system adjustment  
CD : Test disc for adjustment (STD-903 or equivalent)  
Test disc for inspection (STD-914 or equivalent)

## 6.2 MEASURING INSTRUMENTS

- (1) Laser Power Meter  
Following power meter manufactured by Advantest Corporation  
or equivalent :  
TQ8210 + TQ82017  
TQ8215 + TQ82021  
TQ8215 + TQ82010 + TQ82017
- (2) Audio Analyzer
- (3) Oscilloscope
- (4) Distortion Factor Meter
- (5) CD Jitter Meter
- (6) Block Error Rate Counter

## 6.3 TEST MODE

### 6.3.1 Test Mode

For adjustment, set the unit to Test mode. To enter Test mode, turn on the unit with the Test Mode Short-Circuit pattern on the FUNCTION Assy. In Test mode, all the displays (FL, LEDs) on the unit should be lit. If not, turn the power off and repeat the same steps again.

Fig. 1 Enter the Test mode

### 6.3.2 Operations in Test Mode

In Test mode, the following adjustment functions are assigned to the buttons, as explained below.

Fig.2 During adjustment of LD power (Input selector: analog)

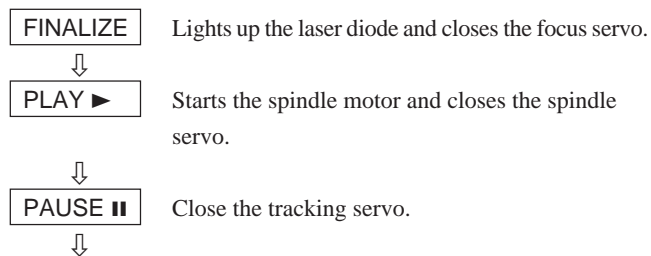

Fig.3 During adjustment of servo system (Input selector: optical)

### 6.3.3 How to Playback a Disc in Test Mode

In test mode, since the servos operate independently, playing back a disc requires that you operate the keys in the correct order to close the servos.

Here is the key operation sequence for playing back a disc in test mode.

Wait at least 2 – 3 seconds between each of these operations.

6.4 ADJUSTMENT 1 (LASER DIODE POWER ADJUSTMENT)

Fig. 4 Adjustment points

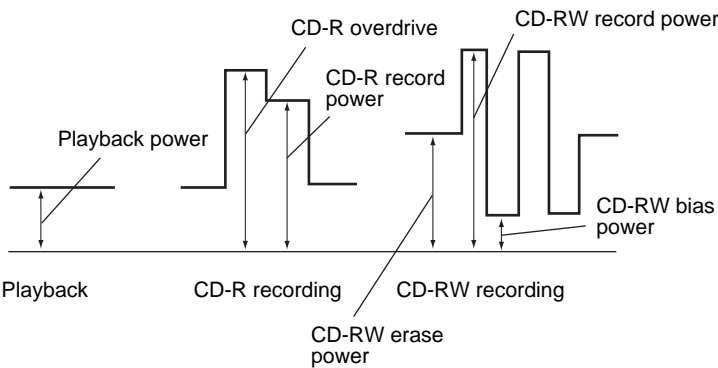

Fig.5 Output power of the laser diode

- Note 1 : Attach the remote sensor of the laser power meter to a point angled away about 10 degrees against the pickup lens and where the maximum power is detected, so that there will be no light reflected onto the pickup.
- Note 2 : When adjusting with VR101 to VR106, first turn them completely counter-clockwise and then adjust clockwise, so that the value to be reached is not exceeded.
- Note 3 : Set the wavelength of laser power meter to 780 nm.

The following adjustments 1 through 3 must be done with the Input Selector set to the Analog position (LD power adjustment mode).

6.4.1 Playback Power Adjustment

Test Point	Pickup objective lens
Adjustment Point	VR101 (PB. PW)
Adjustment Value	0.60 mW ± 0.05 mW
<p>[Procedure]</p> <p>(1) Check that "CD" is displayed on the FL display. If "CD-R" or "CD-RW" is displayed, press the STOP button repeatedly until "CD" is displayed.</p> <p>(2) Press the RECORD button. The LED for confirmation of LD emission will light in orange.</p> <p>(3) Press the REC MUTE button. The LED for confirmation of LD emission will light in red. The LD is emitting in this status.</p> <p>(4) Turn VR101 clockwise until the adjustment value to be reached is obtained.</p> <p>(5) Press the STOP button to shut off the LD.</p>	

### 6.4.2 CD-R Record Power Adjustment

<b>Test Point</b>	Pickup objective lens
<b>Adjustment Point</b>	VR102 (R REC. PW1), VR103 (R REC. PW2)
<b>Adjustment Value</b>	VR102 : 4.60 mW $\pm$ 0.1 mW VR103 : Addition of 0.1 mW $\pm$ 0.01 mW to the adjustment value of VR102
<p><b>[Procedure]</b></p> <p>(1) Turn VR102 and VR103 completely counterclockwise to set their power output to minimum.</p> <p>(2) Press the ERASE button once so that "CD-R" appears on the FL display. If the indication is "CD" or "CD-RW," press the ERASE button repeatedly until "CD-R" is displayed on the FL display.</p> <p>(3) Press the RECORD button. The LED for confirmation of LD emission will light in orange.</p> <p>(4) Press the REC MUTE button. The LED for confirmation of LD emission will light in red. The LD is emitting in this status.</p> <p><b>Adjustment of CD-R record power</b></p> <p>(5) Turn VR102 clockwise until the adjusted value is 4.60 mW <math>\pm</math> 0.1 mW.</p> <p><b>Adjustment of CD-R overdrive power</b></p> <p>(6) Turn VR103 clockwise until the adjusted value becomes adjustment value at Step 5 above + (0.1 mW <math>\pm</math> 0.01 mW).</p> <p>(7) Press the STOP button to shut off the LD.</p>	

### 6.4.3 CD-RW Record Power Adjustment

<b>Test Point</b>	Pickup objective lens
<b>Adjustment Point</b>	VR104 (RW REC. PW0), VR106 (RW REC. PW2), VR105 (RW REC. PW1)
<b>Adjustment Value</b>	VR104 : 0.40 mW $\pm$ 0.05 mW VR106 : 2.40 mW $\pm$ 0.1 mW VR105 : 5.90 mW $\pm$ 0.1 mW
<p><b>[Procedure]</b></p> <p>(1) Turn VR104, VR105 and VR106 completely counterclockwise to set their power output to minimum.</p> <p>(2) Press the ERASE button twice so that "CD-RW" appears on the FL display. If the indication is "CD" or "CD-R," press the ERASE button repeatedly until "CD-RW" appears on the FL display.</p> <p>(3) Press the RECORD button. The LED for confirmation of LD emission will light in orange.</p> <p>(4) Press the REC MUTE button. The LED for confirmation of LD emission will light in red. The LD is emitting in this status.</p> <p>(5) Turn VR104 clockwise until the adjusted value is 0.40 mW <math>\pm</math> 0.05 mW.</p> <p><b>Adjustment of CD-RW record power</b></p> <p>(6) Turn VR106 clockwise until the adjusted value is 2.40 mW <math>\pm</math> 0.1 mW.</p> <p><b>Adjustment of CD-RW erase power</b></p> <p>(7) Turn VR105 clockwise until the adjusted value is 5.90 mW <math>\pm</math> 0.1 mW.</p> <p>(8) Press the STOP button to shut off the LD.</p>	

6.5 ADJUSTMENT 2 (SERVO SYSTEM ADJUSTMENT)

For servo adjustment, set the INPUT SELECTOR to OPTICAL.

Use the RECORD and REC MUTE buttons to make the adjustments.

To register an adjustment, press the (SKIP ID) SET button.

To reset the adjusted values to the initial settings, press and hold the (SKIP ID) CLEAR button for 4 seconds.

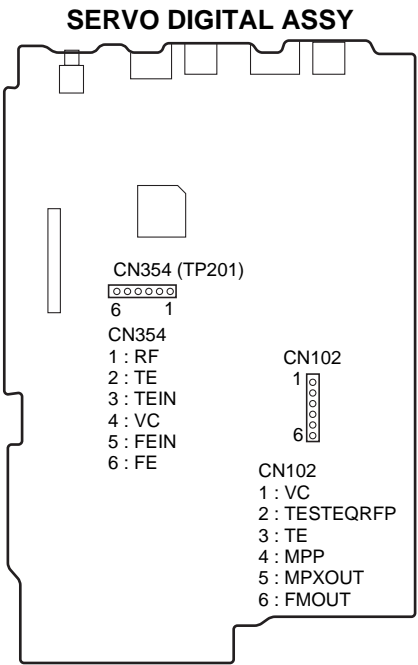

Fig. 6 Adjustment points

6.5.1 Focus Offset Adjustment

Test Point	CN354 - pin 6 (FE)
Adjustment Point	RECORD button and REC MUTE button
Adjustment Value	0 mV ± 10 mV

[Procedure]

(1) Press the AUTO/MANUAL button until "01 F4" appears on the FL display.

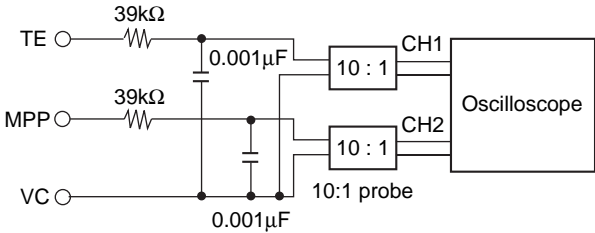

(2) Adjust with the RECORD and REC MUTE buttons until the value for Pin 6 of CN354 is 0 mV ± 10 mV.

(3) Press the SET button to register the adjustment.

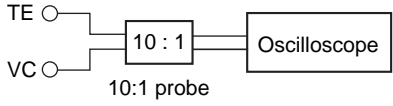

Once the adjustment is registered with the SET button, "?" on the FL display will disappear.

### 6.5.2 M-S Mix Ratio Adjustment

<b>Test Point</b>	CN102 - pin 3 (TE) and pin 4 (MPP)
<b>Adjustment Point</b>	RECORD button and REC MUTE button
<b>Adjustment Value</b>	Adjust until the value of the output signals from pin 3 (TE) and pin 4 (MPP) of CN102 are the same, or the differential output of these signals is minimal.
<p><b>[Procedure]</b></p> <ol style="list-style-type: none"> <li>(1) Press the AUTO/MANUAL button so that "02 F3" appears on the FL display.</li> <li>(2) Press the FINALIZE button for focus-in.</li> <li>(3) Press the PLAY button for CAV-servo spindle kick (the status where the spindle rotates with the focus servo on and tracking servo off).</li> <li>(4) Adjust with the RECORD and REC MUTE buttons until the value to be reached is obtained.</li> <li>(5) Press the SET button to register the adjustment. Once the adjustment is registered with the SET button, "?" on the FL display will disappear.</li> <li>(6) Press the STOP button to stop the unit.</li> </ol> <p>Note: For adjustment, use the following circuits.</p>  <p>Note: Adjustment must be done around mid-radius on a disc.</p>	

### 6.5.3 Tracking Offset Adjustment

<b>Test Point</b>	CN354 - pin 2 (TE) or CN102-pin 3 (TE)
<b>Adjustment Point</b>	RECORD button and REC MUTE button
<b>Adjustment Value</b>	0 mV $\pm$ 10 mV
<p><b>[Procedure]</b></p> <ol style="list-style-type: none"> <li>(1) Press the AUTO/MANUAL button so that "03 F6" appears on the FL display.</li> <li>(2) Adjust with the RECORD and REC MUTE buttons until the above adjustment value to be reached is obtained.</li> <li>(3) Press the SET button to register the adjustment. Once the adjustment is registered with the SET button, "?" on the FL display will disappear.</li> </ol>  <p>Note: Perform the adjustment in Stop mode. This adjustment is possible with the low-pass filter used in adjustment 5 above attached.</p>	

6.5.4 Focus Bias Adjustment

Test Point	CN354 - pin 1 (RF)
Adjustment Point	DIGITAL SYNCHRO button, RECORD button and REC MUTE button
Adjustment Value	Adjust until RF jitter is minimal or that the eye pattern of the RF waveform is most open.

[Procedure]

- (1) Press the DIGITAL SYNCHRO button in Stop mode.  
Note: Make sure the unit is in Stop mode.
- (2) Check that "48" appears on the FL display.
- (3) Press the AUTO/MANUAL button so that "04 34" appears on the FL display.
- (4) Press the FINALIZE button for focus-in.
- (5) Press the PLAY button for CAV-servo spindle kick.
- (6) Press the PAUSE button to close the tracking servo, then set the unit to Playback mode.
- (7) Adjust with the RECORD and REC MUTE buttons until the above adjustment value to be reached is obtained.  
Press the SET button to register the adjustment. Once the adjustment is registered with the SET button, "?" on the FL display will disappear.
- (8) Press the STOP button to stop the unit.

Note: Adjustment must be done around mid-radius on a disc.

## 7. GENERAL INFORMATION

### 7.1 PARTS

#### 7.1.1 IC

- The information shown in the list is basic information and may not correspond exactly to that shown in the schematic diagrams.

## ● Pin Function

No.	Pin Name	I/O	Function	No.	Pin Name	I/O	Function
1	AVDD3	I	Analog positive power supply pin	41	AVDD2	I	Analog positive power supply pin
2	FPDIN	I	Laser monitor diode connection pin	42	XRST	I	Register reset "L": Initialize the register
3	FVREF	I	Reference voltage input for APC	43	WLDON	I	Write LD control input "L": Set Write APC set-value to zero, "H": LD ON
4	FPD0	I/O	Laser monitor output (connect a resistor for I/V conversion between this pin and FPDIN (pin 2) ) / Laser monitor voltage input	44	AGCON	I	Wobble AGC enable input "H": AGC ON , "L": AGC reset
5	WREF	I	Power setting voltage input for Write APC	45	TESTAGC	O	Test pin
6	VWDC	O	Laser driver control output for Write	46	ATFM	O	Wobble signal output
7	VWDCN	I	Laser driver control amp.(– ) for Write	47	AGC1C	O	External capacitor connection pin for AGC response speed setting
8	MPP	O	Main push-pull signal output	48	AGC2C	O	
9	TEIN	I	Input for tracking signal process	49	AGC3C	O	
10	TE	O	Tracking error signal output	50	AGND2	O	Decoupling pin for internal reference voltage
11	FE	O	Focus error signal output	51	BH0	O	Bottom-level output of RRF signal
12	BIAS	O	Connect a bias resistor. RBIAS=4.7kΩ	52	PH0	O	Peak-level output of RRF signal
13	AGND1	O	Decoupling pin for internal reference voltage	53	TESTEQRFN	O	Test pin
14	VREF	I/O	Decoupling pin for internal reference voltage / Reference voltage input	54	TESTEQRFP	O	Test pin
15	NC (VSS)	–	Connect to VSS	55	SLLPFP	I	LPF input (+) for auto slice
16	XLAT	I	Latch input for register setting	56	SLLPFN	I	LPF input (– ) for auto slice
17	SDATA	I	Data input for register setting	57	OSTCC	O	Capacitor connection pin for fc setting of equalizer output offset-canceller
18	SCLK	I	Clock input for register setting	58	WRF	O	Write RF signal output
19	MCLK	I	Main clock input (34.5744MHz)	59	NC (VSS)	–	Connect to VSS
20	DVSS	I	Digital ground pin	60	AVSS1	O	Analog ground pin
21	DVDD	I	Digital positive power supply pin	61	AVDD1	I	Analog positive power supply pin
22	ATFG	O	ATIP FG output (Wobble signal after the binary data conversion)	62	RECDIN	I	RF input for recording block detection
23	XTOR	O	Tracking amplitude detection output	63	RRF	O	Read RF signal output
24	XTAND	O	Tracking error detection output	64	MPXOUT	O	Multiplexer output for signal monitor
25	TZC	O	Tracking zero-cross detection signal output	65	AUX1	I	Auxiliary input (1) for signal monitor
26	RECD2	O	Recording block detection signal 2 "H": Recording block , "L": Unrecording block	66	AUX2	I	Auxiliary input (2) for signal monitor
27	RECD1	O	Recording block detection signal 1 "H": Recording block , "L": Unrecording block	67	AUX3	I	Auxiliary input (3) for signal monitor
28	RZC	O	RF zero-cross detection signal output	68	GIN	I	Side beam signal (G) input
29	DECEFM	O	EFM output after sliced (inversion)	69	HIN	I	Side beam signal (H) input
30	XDECEFM	O	EFM output after sliced (positive-phase)	70	EIN	I	Side beam signal (E) input
31	GAINUP3	I	0 and +18dB switching control input "H": +18dB, "L": 0dB	71	FIN	I	Side beam signal (F) input
32	GAINUP2	I		72	HAVC	I	Center voltage input of main and side beam signals
33	GAINUP1	I		73	DIN	I	Main beam signal (D) input
34	SLHOLD	I	Slice level hold signal input "H": Hold	74	CIN	I	Main beam signal (C) input
35	MPDSH	I	Sample pulse input for main-beam "H": Sample , "L": Hold	75	BIN	I	Main beam signal (B) input
36	SPDSH	I	Sample pulse input for side-beam "H": Sample , "L": Hold	76	AIN	I	Main beam signal (A) input
37	WBLSH	I	Sample pulse input for Wobble signal "H": Sample , "L": Hold	77	RREF	I	Power setting voltage input for Read APC
38	RFPDSH	I	Sample pulse input for Read APC "H": Sample , "L": Hold	78	VRDCN	I	Laser driver control amp. (– ) for Read
39	WFPDSH	I	Sample pulse input for Write APC "H": Sample , "L": Hold	79	VRDC	O	Laser driver control output for Read
40	AVSS2	I	Analog ground pin	80	AVSS3	I	Analog ground pin

## ● Pin Function

No.	Pin Name	I/O	Function	No.	Pin Name	I/O	Function
1	DVDD0	–	Digital power supply	41	TE	I	Tracking error input
2	XRST	I	System reset    Reset when "L"	42	CE	I	Center servo analog input
3	MUTE	I	Mute input    Mute when "H"	43	RFDC	I	RF signal input
4	DATA	I	Serial data input from CPU	44	ADIO	O	Test pin    Non connection
5	XLAT	I	Latch input from CPU Serial data is latched at the falling edge.	45	AVSS0	–	Analog GND
6	CLOCK	I	Serial data transfer clock input from CPU	46	IGEN	I	Constant current input for OP amplifier
7	SENS	O	SENS output to CPU	47	AVDD0	–	Analog power supply
8	SCLK	I	Clock input for SENS serial-data readout	48	ASYO	O	EFM full-swing output ("L"=VSS, "H"=VDD)
9	ATSK	I/O	Input and output for anti-shock	49	ASYI	I	Asymmetry compare voltage input
10	WFCK	O	WFCK output	50	RFAC	I	EFM signal input
11	XUGF	O	XUGF output    MNT0 and RFCK output by switching the command.	51	AVSS1	–	Analog GND
12	XPCK	O	XPCK output    MNT1 output by switching the command.	52	CLTV	I	VCO 1 control voltage input for gradual increase
13	GFS	O	GFS output    MNT2 and XROF output by switching the command.	53	FILO	O	Filter output for master PLL (Slave=digital PLL)
14	C2PO	O	C2PO output    MNT3 and GTOP output by switching the command.	54	FILI	I	Filter input for master PLL
15	SCOR	O	Outputs "H" when either subcode sync. S0 or S1 is detected.	55	PCO	O	Charge pump output for master PLL
16	C4M	O	4.2336MHz output    Outputs 1/4 frequency demultiply of V16M in the CAV-W mode and variable pitch.	56	AVDD1	–	Analog power supply
17	WDCK	O	Word clock output    f=2Fs Outputs GRSCOR by command switch	57	BIAS	I	Constant current input of asymmetry circuit
18	DVSS0	–	Digital GND	58	VCTL	I	VCO2 control voltage input for wide-band EFM PLL
19	COUT	I/O	Input and output of track-number count signal	59	V16M	I/O	VCO2 oscillation output for wide-band EFM PLL Clock input for wide-band EFM-PLL by command switch
20	MIRR	I/O	Mirror signal input and output	60	VPCO	O	Charge pump output for wide-band EFM PLL
21	DFCT	I/O	Defect signal input and output	61	DVDD2	–	Digital power supply
22	FOK	I/O	Focus OK signal input and output	62	ASYE	I	Asymmetry circuit ON/OFF control (L:OFF, H:ON)
23	PWMI	I	External control input of spindle motor	63	MD2	I	Digital out ON/OFF control (L:OFF, H:ON)
24	LOCK	I/O	GFS is sampled at 460Hz; when GFS is "H", this pin outputs "H". If GFS is "L" eight consecutive samples, this pin outputs "L". Input when LKIN="1".	64	DOUT	O	Digital out output
25	MDP	O	Servo control output of spindle motor	65	LRCK	O	D/A interface    LR clock output    f=Fs
26	SSTP	I	Detection signal input of disc innermost	66	PCMD	O	D/A interface    Serial data output (2's COMP, MSB first)
27	FSTO	O	Outputs 2/3 frequency demultiply of XTAL pin	67	BCK	O	D/A interface    Bit clock output
28	DVDD1	–	Digital power supply	68	EMPH	O	Outputs "H" when the playback disc has emphasis, and "L" when there is no emphasis.
29	SFDR	O	Sled drive output	69	XTSL	I	X'tal selection input 16.9344MHz: L, 33.8688MHz: H
30	SRDR	O		70	DVSS2	–	Digital GND
31	TFDR	O	Tracking drive output	71	XTAI	I	Crystal oscillation circuit input Input the external master clock via this pin.
32	TRDR	O		72	XTAO	O	Crystal oscillation circuit output
33	FFDR	O	Focus drive output	73	SOUT	O	Serial data output in the servo block
34	FRDR	O		74	SOCK	O	Serial data readout clock output in the servo block
35	DVSS1	–	Digital GND	75	XOLT	O	Serial data latch output in the servo block
36	TEST	I	TEST pin : normally GND	76	SQSO	O	SubQ 80-bit, PCM peak and level data output CD TEXT data output
37	TES1	I		77	SQCK	I	Clock input for SQSO readout
38	VC	I	Center voltage input	78	SCSY	I	Input for resynchronization of GRSCOR
39	FE	I	Focus error signal input	79	SBSO	O	Serial output of Sub P to W
40	SE	I	Sled error signal input	80	EXCK	I	Clock input for SBSO readout

### Notes)

- PCMD is an MSB first, two's complement output.
- GTOP is used to monitor the frame sync protection status. (High:sync protection window released)
- XUGF is the negative pulse for the frame sync derived from the EFM signal. It is the signal before sync protection.
- XPCK is the inverse of the EFM PLL clock. The PLL is designed so that the falling edge of XPCK and the EFM signal transition point coincide.
- GFS goes high when the frame sync and the insertion protection timing match.
- RFCK is derived with the crystal accuracy. This signal has a cycle of 136μs.
- C2PO represents the data error status.
- XROF is generated when the 32K RAM exceeds the ±28 Frame jitter margin.

## 8. PANEL FACILITIES AND SPECIFICATIONS

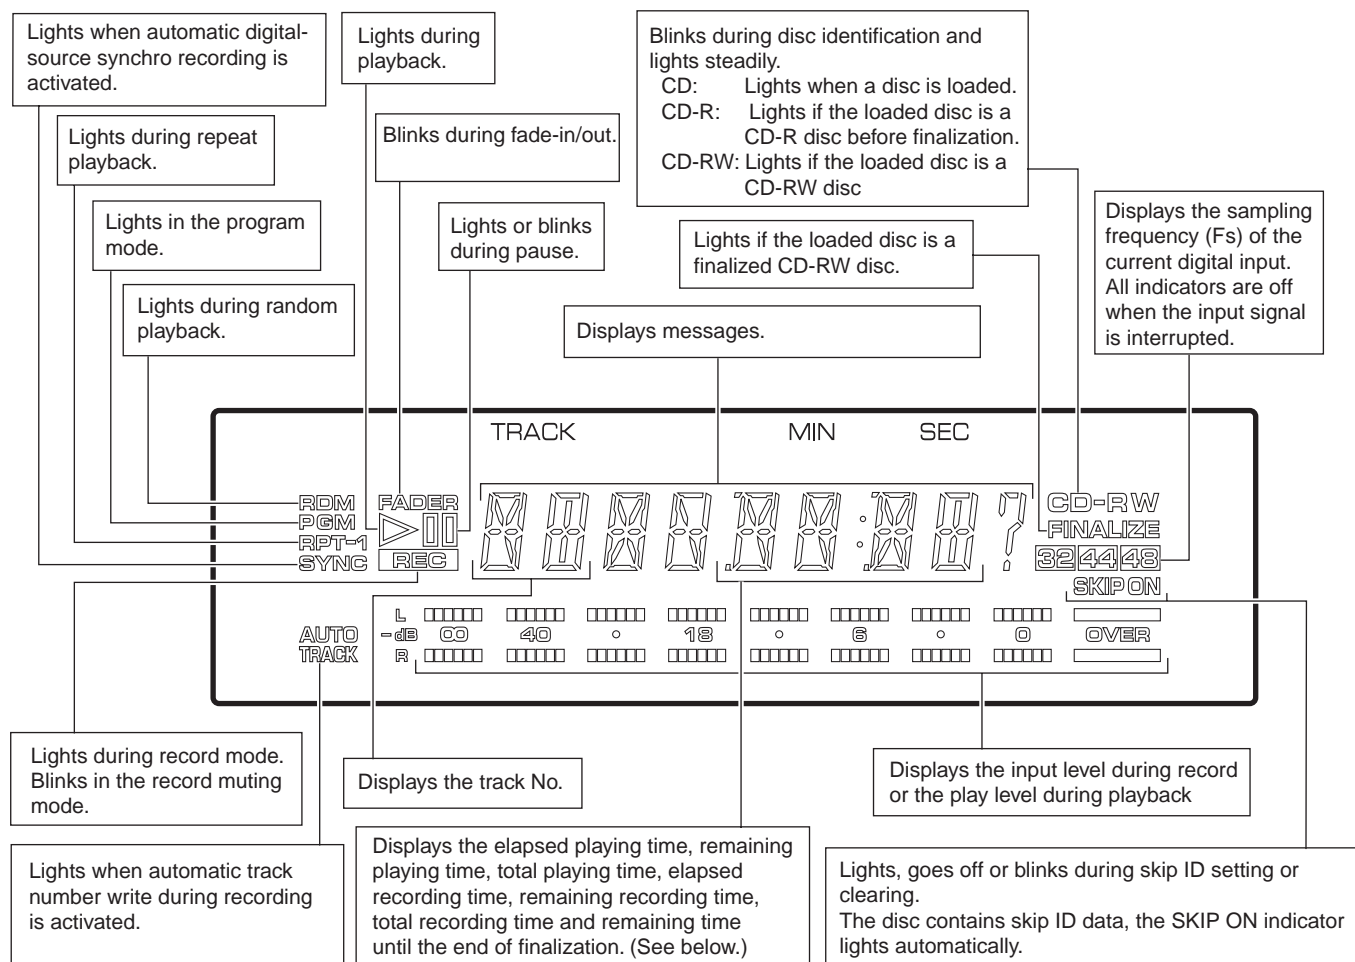

### • PANEL FACILITIES

#### FRONT PANEL

The operations available using buttons marked "\*" are also available using the buttons with the same names or inscriptions on the remote control unit.

## DISPLAY PANEL

## Switching the time display

The following operation allows you to check the recording time information during recording or playing time information during playback. Every time the TIME button is pressed, the time information contents are switched in order of A → B → C → D.

The display mode varies depending on whether the current operation is recording or playing back (in order of A → B → C during recording).

### During recording

(A) : Elapsed recording time (2 min. 16 sec. after the start of track No. 2)

(C) : Total recording time (3 min. 50 sec. of 2-track recording)

(B) : Remaining recording time (56 min. 10 sec. remaining on the disc)

### During playback

(A) : Elapsed playing time (2 min. 16 sec. after the start of track No. 1)

(D) : Total playing time (60 min. 0 sec. for 8 tracks)

(B) : Remaining playing time of track being played (3 min. 20 sec. remaining for track No. 1)

(C) : Remaining playing time of all tracks on disc being played (46 min. 40 sec. remaining on the disc)

## REMOTE CONTROL UNIT

Operations performed by buttons marked "\*" can also be carried out by using buttons with the same name on the main unit.

### Remote controllable range

Remote control sensor

- Point the remote control unit and press its buttons.

### Caution on the remote control operation

- Remote control may be impossible if there is an obstacle between the remote control unit and main unit or if the remote control unit is operated at too great of an angle from the remote control sensor.
- Erroneous operation may occur if strong light such as direct sunlight or fluorescent lamp light is incident to the remote control sensor.
- The main unit may operate erroneously if it is used near equipment radiating infrared rays or if the infrared remote control unit of other equipment is used near the unit. On the contrary, if this remote control unit is operated near another piece of equipment which can be controlled with infrared rays, the equipment may operate erroneously.
- Replace batteries when the remote controllable range decreases noticeably.

## • SPECIFICATIONS (KU/CA TYPE)

### 1. GENERAL

Model ..... Compact disc audio system  
 Applicable discs ..... CDs, CD-Rs and CD-RWs  
 Power supply ..... AC 120 V, 60 Hz  
 Power consumption ..... 20 W  
 Operating temperature ..... +5 °C to +35 °C  
 (+41 °F to +95 °F)  
 Weight (without package) ..... 4.8 kg (10 lb 9 oz)  
 Max. dimensions ..... 420 (W) x 385 (D) x 105 (H) mm  
 16-9/16 (W) x 15-3/16 (D) x 4-1/8 (H) in

### 2. AUDIO UNIT

Frequency characteristics ..... 2 Hz to 20 kHz  
 Playback S/N ..... 110 dB (EIAJ)  
 Playback dynamic range ..... 98 dB (EIAJ)  
 Playback total harmonic distortion ..... 0.002 % (EIAJ)  
 Playback channel separation ..... 100 dB  
 Recording S/N ..... 92 dB  
 Recording dynamic range ..... 92 dB  
 Recording total harmonic distortion ..... 0.005 %  
 Output voltage ..... 2 V  
 Wow-flutter ..... Less than measurement limit  
 ((±0.001 % W.PEAK) (EIAJ))  
 Number of channels ..... 2 channels (stereo)  
 Digital output  
 Coaxial output ..... 0.5 Vp-p ±20 % (75 Ω)  
 Optical output .... -15 to -21 dBm (wavelength: 660 nm)  
 Frequency deflection: Level 2 (standard mode)

\* Recording specification values are for the LINE input (ANALOG).

### 3. INPUT JACKS

Optical digital input jack  
 Coaxial digital input jack  
 Audio LINE input jack

### 4. OUTPUT JACKS

Optical digital output jack  
 Coaxial digital output jack  
 Audio LINE output jack

### 5. ACCESSORIES

- Remote control unit ..... 1
- Size AA/R6 dry cell batteries ..... 2
- Audio cable ..... 2
- AC power cord ..... 1
- Operating Instructions ..... 1

### 6. PICKUP

- Laser wavelength (λ) ..... 778 to 787 nm
- Object lens out (3 beam total) ..... 23mW
- Laser class ..... III b

### NOTE:

The specifications and design of this product are subject to change without notice, due to improvements.
